

Paresh Kumar *(Technical Support Consultant)*

+91 8007994287 | pareshsharma000@gmail.com | Pune, India

Skills Summary

Technical Support

- Tier 1 Support, Tier 2 Support, Ticket Triage, Incident Management, Escalation Handling, SLA Management, Root Cause Investigation, Customer Issue Resolution

Networking

- TCP/IP, DNS, Routing, Port Connectivity, Firewall Basics, VPN Troubleshooting, Split Tunneling, IPsec Tunnels, WireGuard Tunnels, OpenVPN, IKEv2, Network Connectivity Investigation

Logs and Troubleshooting

- Log File Analysis, Error Investigation, Packet Trace Review, Application Troubleshooting, Connectivity Troubleshooting, API Error Analysis, JSON Validation, Reproduction Steps

Cloud and Infrastructure

- AWS, CloudWatch, EC2, S3, IAM, VPC, Azure Fundamentals, Cloud-Hosted Application Support, Security Groups

Identity and Access

- SSO Concepts, Azure AD, Google Workspace, Account Access Support, Login Troubleshooting, User Configuration Validation

Operating Systems and Devices

- Windows, Linux, UNIX, Android, iOS, macOS, Device Configuration Support

Application and API Support

- REST APIs, HTTP Status Codes, JSON Payloads, Integration Support, Application Errors, Login Issues, Configuration Issues

Monitoring and Data Investigation

- CloudWatch, Grafana, Monitoring Dashboards, Alert Review, SQL, Query Analysis, Data Validation

Scripting and Tools

- Python, Bash, CRM Tools, Salesforce, Zendesk, Freshdesk, Jira, Technical Documentation, Knowledge Base Updates

Overview

6 years of experience providing technical and customer support for cloud-hosted applications, device platforms, account access, connectivity, and integration issues. Experienced in handling Tier 1 and Tier 2 cases through email, chat, phone, and CRM systems with clear ownership and SLA-focused communication. Skilled in troubleshooting DNS, TCP/IP connectivity, routing, port access, VPN-related issues, application logs, REST APIs, JSON payloads, and customer-reported errors across Windows, Linux, Android, and cloud environments. Comfortable analyzing logs, reproducing issues, validating configurations, documenting findings, and coordinating with engineering teams for complex escalations.

Experience Summary

- 6 years of experience in technical support, customer support, cloud application support, and incident investigation.
- Strong experience supporting customers through chats, emails, phone calls, and CRM ticketing platforms.
- Skilled in troubleshooting DNS, TCP/IP connectivity, routing, port access, VPN configuration, and firewall-related issues.
- Familiar with network infrastructure concepts including split tunneling, IPsec tunnels, WireGuard-based tunnels, OpenVPN, and IKEv2.
- Experienced in reading application logs, API responses, error messages, JSON payloads, and monitoring alerts.
- Hands-on experience with Windows, Linux, Android, AWS services, cloud-hosted applications, and device support.
- Strong understanding of account access, SSO concepts, Azure AD, identity validation, and customer onboarding support.
- Experienced in ticket triage, incident escalation, root cause investigation, technical documentation, and cross-functional coordination.

Education

- B.A – Jiwaji University, Gwalior – 2020

Professional Experience

Role	
Client Name	OLA — Senior Technical Support Engineer
Client Location	India
Customer Domain	Cloud Application Support / Financial Technology
Duration	Mar 2025 – Present
Technologies	AWS, CloudWatch, S3, SQL, REST APIs, JSON, Linux, Windows, Grafana, DNS, TCP/IP, VPN, CRM Tools, Python, Bash

Scope of Work:

Providing customer-facing technical support for cloud-hosted applications, account access, API integrations, connectivity issues, and production incidents through chats, emails, phone calls, and CRM tickets.

Responsibilities, Tasks & Achievements:

- Investigate customer-reported application failures by reviewing CloudWatch logs, API responses, JSON payloads, and monitoring alerts.
 - Troubleshoot DNS resolution, TCP/IP connectivity, routing paths, port access, security group rules, and firewall-related connection issues.
 - Support VPN-related cases by validating tunnel configuration details, split tunneling behavior, access routes, and endpoint connectivity.
 - Analyze service logs and error messages to identify login, account access, integration, transaction, and application performance issues.
 - Validate REST API requests, HTTP status codes, authentication behavior, request payloads, and response errors during customer escalations.
 - Reproduce reported issues in supported environments and document troubleshooting steps, affected services, timestamps, and customer impact.
 - Escalate complex production incidents to engineering teams with complete logs, technical findings, reproduction details, and investigation notes.
 - Maintain accurate customer communication through email, chat, and CRM updates while meeting SLA and case ownership requirements.
-

Role

Client Name	Vivo — Technical Support Engineer
Client Location	India
Customer Domain	Device Support / Enterprise Application Support
Duration	Jul 2020 – Feb 2025
Technologies	Windows, Android, Linux, iOS, macOS, SQL, REST APIs, JSON, AWS, DNS, TCP/IP, Routing, CRM Tools, Python, Bash

Scope of Work:

Provided technical and customer support for device operating systems, enterprise applications, account access, configuration issues, network connectivity, and customer escalations across multiple support channels.

Responsibilities, Tasks & Achievements:

- Resolved customer cases involving device configuration, operating system behavior, application errors, account access, and service connectivity.
- Guided users through network troubleshooting steps involving Wi-Fi, DNS settings, IP configuration, port connectivity, and routing checks.
- Supported VPN and remote access issue investigation by collecting device details, connection logs, network information, and error screenshots.
- Reviewed customer-provided logs, crash reports, API details, and JSON data to identify application and integration issues.
- Assisted with login and identity-related issues by validating account setup, access permissions, SSO behavior, and device configuration.
- Used SQL checks and support tools to validate transaction records, account data, service status, and reported application behavior.
- Created clear escalation tickets for unresolved issues, including logs, troubleshooting actions, customer impact, and reproduction steps.
- Updated troubleshooting guides and knowledge base articles for common device, application, connectivity, and access-related support cases.
